User Story	Acceptance Criteria
1. As a user, I want to have the opportunity to send several photos at once, so that I can select and send up to 10 photos without having to upload each one separately.	The user openes a section with all the images stored on their device. It is possible to select from 1 to 10 files at a time. After selection, the "Send" button appears. After clicking on "Send", all selected files are sent in one message to the chat.
2. As a user, I want the app to automatically check if the selected photo contains a cat, so that I don't send random images.	After selecting a photo, the app checks if there is a cat in the image. If a cat is recognized, the photo is allowed to be sent. If there's no cat, the photo isn't added, and the user receives the message "It seems that there're no cats in the image, try another photo".
3. As a user, I want to be able to turn off notifications for a particular chat for a certain period of time, so that I don't receive messages from it temporarily.	A user can enter a chat room and click the "Mute" button. After clicking "Mute", the user sees a list of time options: 1 hour, 2 hours, 6 hours, 24 hours, 2 days, 7 days. The user selects one of the options. After that, push notifications from this chat aren't received for the selected time. When the set period expires, the notifications are automatically turned on.
4. As a user, I want to be able to enter only Cyrillic and Latin letters (uppercase and lowercase) and emojis in the Username field, so that the name is displayed correctly in the application.	Only letters (Cyrillic: А-Я, а-я, Latin: A-Z, a-z) and emojis can be entered in the Username field. If the user tries to enter numbers, special characters, or spaces, the system doesn't accept them. The name created from letters and emojis is displayed in the interface exactly as the user entered it.
5. As a user, I want to be able to create group chats with an unlimited number of participants, so that I can share photos with everyone at once, instead of sending them individually.	The user has the "Create group chat" button in the menu. When the user creates a group, they can add any number of participants from the contact list or by searching the other accounts using nicknames. All members of the group receive notifications and can see the same photos as soon as they are sent. New members who join later can view the group's previous message history.
6. As a user, I would like to have a delayed sending feature, so that I can choose a time to send within the next 24 hours and send the message later.	In every chat, there are three buttons in the same line as the message input field: 1. "Send a message" - to send a message instantly; 2. "Send a message later" - to select the time of the delayed sending; 3. "Scheduled Messages" - to go to the section with scheduled messages. After entering the message and clicking "Send a message later" button, the menu for selecting the time opens. The user can choose any time within the next 24 hours. After selecting the time and confirming it with the "Choose the time" button, the message is saved in the "Scheduled Messages" section. The text of the message, the date and time of the scheduled sending are displayed in the section. When the selected time comes, the message is automatically sent to the chat and deleted from the "Scheduled Messages" section.
